

TUSB215-Q1 USB 2.0 High Speed Signal Conditioner with USB BC1.2 CDP

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified with the Following Results
 - Device Temperature Grade 2: –40°C to 105°C Ambient Operating Temperature
 - Device HBM Classification Level H1C
 - Device CDM Classification Level C3
- Compatible with USB 2.0, OTG 2.0 and BC 1.2
- Pin strap or I²C Configurable
- USB BC1.2 Charging Downstream Port (CDP) controller
- Support for LS, FS, HS signaling
- Ultra-low USB Disconnect and Shutdown Power Consumption
- Scalable solution - Daisy Chain Device for High Loss Applications
- D1P/M and D2P/M Interchangeable and Host/Device Agnostic
- Supports up to 5m pre-channel or 2m post-channel Cable Length
 - Four Selectable AC Boost Setting Via External Pulldown Resistor
 - DC Boost Along With AC Boost for Best Signal Integrity

2 Applications

- Automotive Infotainment
- Notebooks
- Desktops
- Docking Stations
- Tablets
- Cell Phones
- Active Cable, Cable Extenders
- Backplane
- Televisions

3 Description

The TUSB215-Q1 is a USB High-Speed (HS) signal conditioner, designed to compensate for ISI signal loss in a transmission channel which helps passing USB electrical compliance tests.

TUSB215-Q1 has a patent-pending design which is agnostic to USB Low Speed (LS) and Full Speed (FS) signals. LS and FS signal characteristics are unaffected by the TUSB215-Q1 while HS signals are compensated.

Programmable signal AC boost and DC boost permits fine tuning device performance to optimize High Speed signals at the connector, this allows use in many different applications.

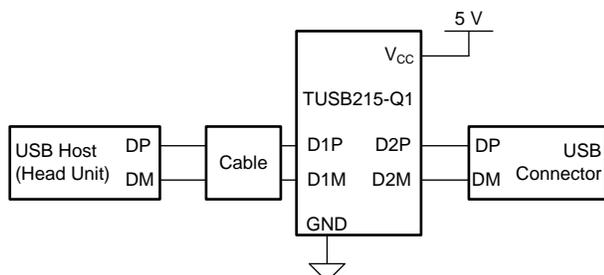

In addition, TUSB215-Q1 is compatible with the USB On-The-Go (OTG) and Battery Charging (BC) protocols. TUSB215-Q1 further acts as Charging Downstream Port (CDP) controller and handles the necessary handshakes with the downstream device.

DATE	REVISION	NOTES
September 2017	*	Initial release.

5 Pin Configuration and Functions

Pin Functions

PIN		I/O	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO.			
EQ	1	I	N/A	USB High Speed AC boost select via external pull down resistor. Sampled upon de-assertion of RSTN. Does not recognize real time adjustments. See application section for details. Auto selects maximum AC boost level when left floating.
NC	2, 3	N/A	N/A	Leave unconnected.
DC_BOOST ⁽¹⁾ /ENA_HS	4	I/O		In I2C mode: Reserved for TI test purpose. In non-I2C mode: At reset: 3-level input signal DC_BOOST. USB High Speed DC signal boost selection. H (pin is pulled high) – 80 mV M (pin is left floating) – 60 mV L (pin is pulled low) – 40 mV After reset: Output signal ENA_HS. Flag indicating that channel is in High Speed mode. Asserted upon: 1. Detection of USB-IF High Speed test fixture from an unconnected state followed by transmission of USB TEST_PACKET pattern. 2. Squelch detection following USB reset with a successful HS handshake [HS handshake is declared to be successful after single chirp J chirp K pair where each chirp is within 18 μ s – 128 μ s].
D2P	5	I/O	N/A	USB High Speed positive port.
D2M	6	I/O	N/A	USB High Speed negative port.
GND	7	PWR	N/A	Ground
VREG	8	O	N/A	1.8-V LDO output. Only enabled when operating in High Speed mode. Requires 0.1- μ F external capacitor to GND to stabilize the core.
D1M	9	I/O	N/A	USB High Speed negative port..
D1P	10	I/O	N/A	USB High Speed positive port.
SDA ⁽²⁾	11	I/O	RSTN asserted: 500 k Ω PD	I2C Mode: Bidirectional I2C data pin [I2C address = 0x2C]. In non I2C mode: Reserved for TI test purpose.

(1) Pull-down and pull-up (to 3.3 V) resistors for DC_BOOST pins must be between 22 k Ω to 47 k Ω in non I²C mode.

(2) Pull-up resistors for SDA and SCL pins in I²C mode should be 4.7 k Ω (5%). If both SDA and SCL are pulled up at reset the device enters into I²C mode.

Pin Functions (continued)

PIN		I/O	INTERNAL PULLUP/PULLDOWN	DESCRIPTION
NAME	NO.			
VCC	12	PWR	N/A	Supply power
SCL ⁽²⁾ /CD	13	I/O	RSTN asserted: 500 kΩ PD	In I2C mode: I2C clock pin [I2C address = 0x2C]. Non I2C mode: After reset: Output CD. Flag indicating that a USB device is attached (connection detected). Asserted from an unconnected state upon detection of DP or DM pull-up resistor. De-asserted upon detection of disconnect.
RSTN	14	I	500 kΩ PU	Device disable/enable. Low – Device is at reset and in shutdown, and High – Normal operation. Recommend 0.1-μF external capacitor to GND to ensure clean power on reset if not driven. If the pin is driven, it must be held low until the supply voltage for the device reaches within specifications.

6 Specifications

6.1 Absolute Maximum Ratings

 over operating free-air temperature and voltage range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Supply Voltage Range	VCC	-0.3	6	V
Voltage Range on I/O pins	DxP, DxM, RSTN, EQ, SCL, SDA, DC_BOOST, VREG	-0.3	3.8	V
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±2000
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature and voltage range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V _{CC}	Supply voltage	4.4	5	5.5	V
T _A	Ambient temperature	TUSB215Q1		105	°C
T _J	Junction temperature	TUSB215Q1		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		RGY (VQFN)	UNIT
		14 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	49.1	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	52.8	°C/W
R _{θJB}	Junction-to-board thermal resistance	24.2	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	2.2	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	24.3	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	7	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
POWER						
I _{ACTIVE_HS}	High-speed active current	USB channel = HS mode; 480 Mbps traffic; V _{CC} = 5V; V _{CC} supply stable; DC Boost = 60 mV		18	30	mA
I _{IDLE_HS}	High-speed idle current	USB channel = HS mode; no traffic; V _{CC} = 5V; V _{CC} supply stable; DC Boost = 60 mV		13	22	mA
I _{SUSPEND_HS}	High-speed suspend current	USB channel = HS suspend mode; V _{CC} = 5V; V _{CC} supply stable		0.76	1.5	mA
I _{FS_LS}	Full/Low speed current	USB channel = FS mode or LS mode; V _{CC} = 5V		0.77	1.5	mA
I _{DISCONNECT}	Disconnect current	Host side application; No device attachment; V _{CC} = 5V		0.86	1.5	mA
I _{RSTN}	Disable current	RSTN driven low; V _{CC} supply stable; V _{CC} = 5V		22	80	μA
I _{LKG_FS}	Pin fail-safe leakage current for SDA, SCL, DC_BOOST, DxP/N, RSTN	V _{CC} = 0 V; Pin at 3.6 V			40	μA
RSTN						
V _{IH}	High-level input voltage	V _{CC} = 4.4V	2		3.6	V
V _{IL}	Low-level input voltage	V _{CC} = 5.5V	0		0.8	V
I _{IH}	High-level input current	V _{IH} = 3.6 V	-4		4	μA
I _{IL}	Low-level input current	V _{IL} = 0 V	-11		11	μA
EQ						
R _{EQ}	External pull-down resistor on EQ pin.	AC Boost Level 0			160	Ω
		AC Boost Level 1	1.4		2	kΩ
		AC Boost Level 2	3.7		3.9	kΩ
		AC Boost Level 3	6			kΩ
CD, ENA_HS						
V _{OH}	High-level output voltage	I _O = -50μA	2.4			V
V _{OL}	Low-level output voltage	I _O = 50μA			0.4	V
SCL, SDA						
C _{I2CBUS}	I2C Bus capacitance		4		150	pF
V _{IH}	SDA and SCL input high level voltage	V _{CC} = 4.4V	2		3.6	V
V _{IL}	SDA and SCL input Low level voltage	V _{CC} = 5.5V			0.8	V
V _{SDA_OL}	SDA low-level output voltage	4.7kΩ pullup to 3.6V; V _{CC} = 4.4V			0.4	V
I _{SDA_OL}	SDA Low level output current	V _{CC} = 5.5V; I ² C pulled up to 3.6V	1.1			mA
DC_BOOST						

Electrical Characteristics (continued)

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{IH}	High-level input voltage	$V_{CC} = 5V$	2.4		3.6	V
V_{IM}	Mid-level input voltage	$V_{CC} = 5V$		1.6		V
V_{IL}	Low-level input voltage	$V_{CC} = 5V$	0		0.4	V
DxP, DxM						
C_{IO_DXX}	Capacitance to GND	Measured with LCR meter and device powered down. 1 MHz sinusoid, 30 mVpp ripple		2.7		pF

6.6 Switching Characteristics

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
F_{BR_DXX}	DxP/M Bit Rate	USB channel = HS mode; 480 Mbps traffic; VCC supply stable			480.24	Mbps
t_{RISE_DXX}	DxP/M rise time	10% - 90%; $V_{CC} = 5.5V$; Max AC Gain;	100			ps
t_{FALL_DXX}	DxP/M fall time	90% - 10%; $V_{CC} = 5.5V$; Max AC Gain;	100			ps
t_{RSTN_PU} LSE_WIDT H	Minimum width to detect a valid RSTN signal assert when the pin is actively driven	$V_{CC} = 4.4 V$; Refer to Figure 1	20			μs
t_{STABLE}	VCC stable before RSTN de-assertion	Refer to Figure 1	100			μs
t_{VCC_RAM} P	VCC ramp time		0.2		100	ms

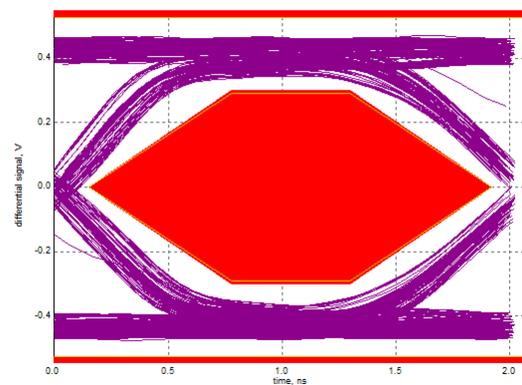

Figure 5. USB2.0 HS Eye diagram, Host far-end with 5m cable pre-channel loss with TUSB215-Q1

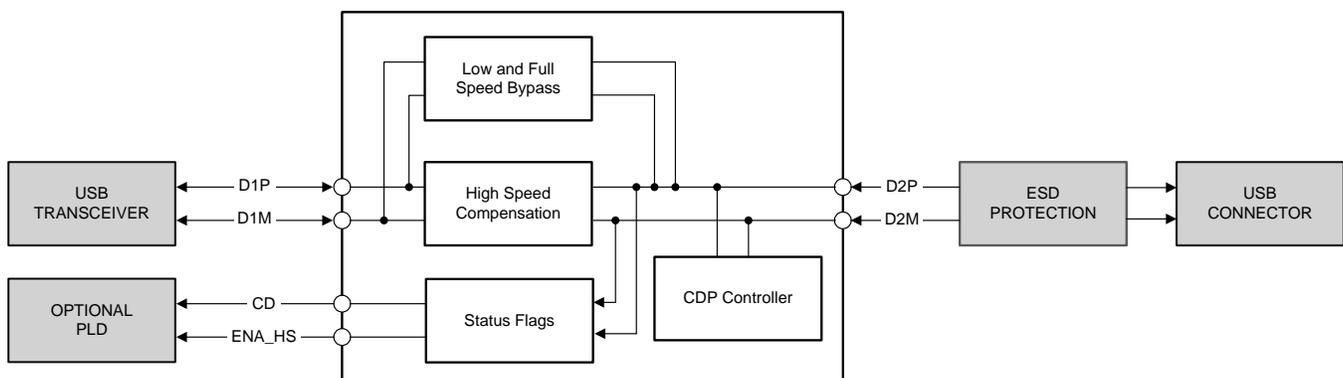

7 Detailed Description

7.1 Overview

The TUSB215-Q1 is a USB High-Speed (HS) signal conditioner, designed to compensate for ISI signal loss in a transmission channel. TUSB215-Q1 has a patent-pending design which is agnostic to USB Low Speed (LS) and Full Speed (FS) signals and does not alter their signal characteristics, while HS signals are compensated. In addition, the design is compatible with USB On-The-Go (OTG) and Battery Charging (BC) specifications. The TUSB215-Q1 provides USB Charging Downstream Port (CDP) controller for applications in which USB host or hub do not have this function.

Programmable signal AC boost through an external resistor on EQ pin permits fine tuning device performance to optimize signals helping to pass USB HS electrical compliance tests at the connector. Additional DC Boost configurable by three level input DC_BOOST pin helps overcoming the cable losses.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 EQ

The EQ pin of the TUSB215-Q1 is used to configure the AC boost of the device. The four levels of AC boost are set through different values of an external pulldown resistor at this pin.

7.3.2 DC BOOST

The DC_BOOST pin of the TUSB215-Q1 is a tri-level pin, used to set the DC gain of the device according to [Table 1](#).

Table 1. DC Boost Settings

DC BOOST SETTING VIA PIN STRAP	
DC_BOOST	DC Boost Setting (mV)
V_{IL}	40
V_{IM}	60
V_{IH}	80

7.3.3 BC1.2 CDP Support

The TUSB215-Q1 main function is a signal conditioner offering the EQ/Boost features to the incoming DP/DM signals. For applications in which USB host or hub do not provide USB BC charging downstream port (CDP) functionality, the TUSB215-Q1 can perform this task.

7.4 Device Functional Modes

7.4.1 Low Speed (LS) Mode

TUSB215-Q1 automatically detects a LS connection and does not enable signal compensation. CD pin is asserted high.

7.4.2 Full Speed (FS) Mode

TUSB215-Q1 automatically detects a FS connection and does not enable signal compensation. CD pin is asserted high.

7.4.3 High Speed (HS) Mode

TUSB215-Q1 automatically detects a HS connection and will enable signal compensation as determined by the configuration of the DC_BOOST pin and the external pulldown resistance on its EQ pin. CD pin asserted high.

7.4.4 Shutdown Mode

TUSB215-Q1 is disabled when its RSTN pin is asserted low. In shutdown mode, the USB channel is still fully operational but there is neither signal compensation nor any indication from the CD pin as to the status of the channel.

7.4.5 I²C Mode

TUSB215-Q1 support 100 kHz I²C for device configuration, status readback and test purposes. This controller is enabled after SCL and SDA pins are sampled high shortly after de-assertion of RSTN. In this mode, the register as described in [Table 2](#) can be accessed by I²C read/write transaction to 7-bit slave address 0x2C. It is necessary to set CFG_ACTIVE bit and reset it to zero after making changes to the EQ and DC Boost level registers to restart the state machine.

NOTE

All registers or fields in [Table 2](#) which are not specifically mentioned are considered reserved. The default value of these reserved registers or fields must not be changed. It is suggested to perform a read-modify-write operation to maintain the default value of the reserved fields.

Table 2. Register definition

Offset	Bit(s)	Name	Type	Default	Description
0x01	6:4	ACB_LVL	RW	XXX (Sampled from EQ pin at reset)	Sets the level of AC boost 000 : Level 0 AC boost programmed [MIN] 001 : Level 1 AC boost programmed 011 : Level 2 AC boost programmed 111 : Level 3 AC boost programmed [MAX]
0x03	0	CFG_ACTIVE	RW	1b	Configuration mode 0 : Normal mode. State machine enabled. 1 : Configuration mode: State machine disabled. After reset, if I2C mode is true (SCL and SDA are both pulled high) it is maintained until it is cleared by an I2C write, but, if I2C mode is not true, it is cleared automatically.

Device Functional Modes (continued)
Table 2. Register definition (continued)

Offset	Bit(s)	Name	Type	Default	Description
0x0E	2:0	DCB_LVL	RW	XXX (Sampled from DC_BOOST pin at reset)	Sets the level of DC Boost 011 : 40mV (DC_Boost = L) 101 : 60mV (DC_Boost = M, default) 111 : 80mV (DC_Boost = H)

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

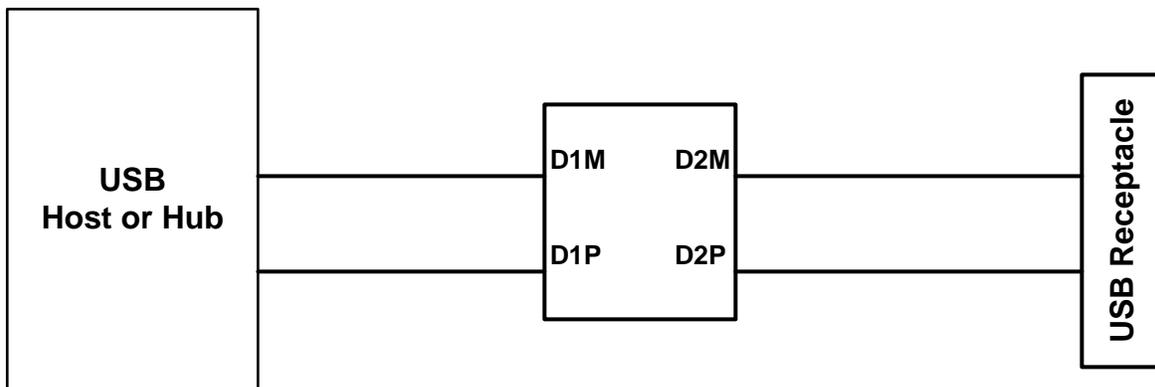

8.1 Application Information

The primary purpose of the TUSB215-Q1 is to re-store the signal integrity of a USB High Speed channel up to the USB connector. The loss in signal quality stems from reduced channel bandwidth due to high loss PCB trace and other components that contribute a capacitive load. This can cause the channel to fail the USB near end eye mask. Proper use of the TUSB215-Q1 can help to pass this eye mask. Additionally the DC Boost helps overcoming DC losses from cables and traces.

A secondary purpose is to use the CD pin of the TUSB215-Q1 to control other blocks on the customer platform if so desired. The TUSB215-Q1 also provides CDP controller function.

8.2 Typical Application

A typical application is shown in [Figure 6](#). In this setup, D2P and D2M face the USB connector while D1P and D1M face the USB host or hub. If desired, the orientation may be reversed [that is, D2 faces transceiver and D1 faces connector].

Figure 6. Typical Application

Typical Application (continued)

8.2.1 Design Requirements

For this design example, use the parameters shown in the table below.

Table 3. Design Parameters

PARAMETER				VALUE
V_{CC} (4.4 V to 5.5 V)				5 V
I ² C support required in system (Yes/No)				No
AC Boost		R_{EQ}	Level	AC Boost Level 2: $R_{EQ} = 3.83\text{ k}$
		0- Ω	0	
		1.69 k \pm 1%	1	
		3.83 k \pm 1%	2	
		DNI	3	
DC Boost		R_{DC1}	R_{DC2}	Level
		22 k Ω - 47 k Ω	Do Not Install (DNI)	40 mV Low DC boost
		DNI	DNI	60 mV Mid DC boost
		47 k Ω	24 k Ω	80 mV High DC boost
				Mid DC Level: $R_{DC1} = \text{DNI}$ $R_{DC2} = \text{DNI}$

8.2.2 Detailed Design Procedure

TUSB215-Q1 requires a valid reset signal as described in the power supply recommendations section. The capacitor at RSTN pin is not required if a microcontroller drives the RSTN pin according to recommendations.

VREG pin is the internal LDO output that requires a 0.1- μ F external capacitor to GND to stabilize the core.

The ideal AC boost setting is dependent upon the signal chain loss characteristics of the target platform. The general recommendation is to start with AC boost level 0, and then increment to AC boost level 1, etc. if permissible. Same applies to the DC Boost setting where it is recommended to plan for the required pads or connections to change boost settings, but to start with DC boost level 1.

In order for the TUSB215-Q1 to recognize any change to the AC and DC Boost settings, the RSTN pin must be toggled. This is because the configuration is latched on power up and the inputs are ignored thereafter.

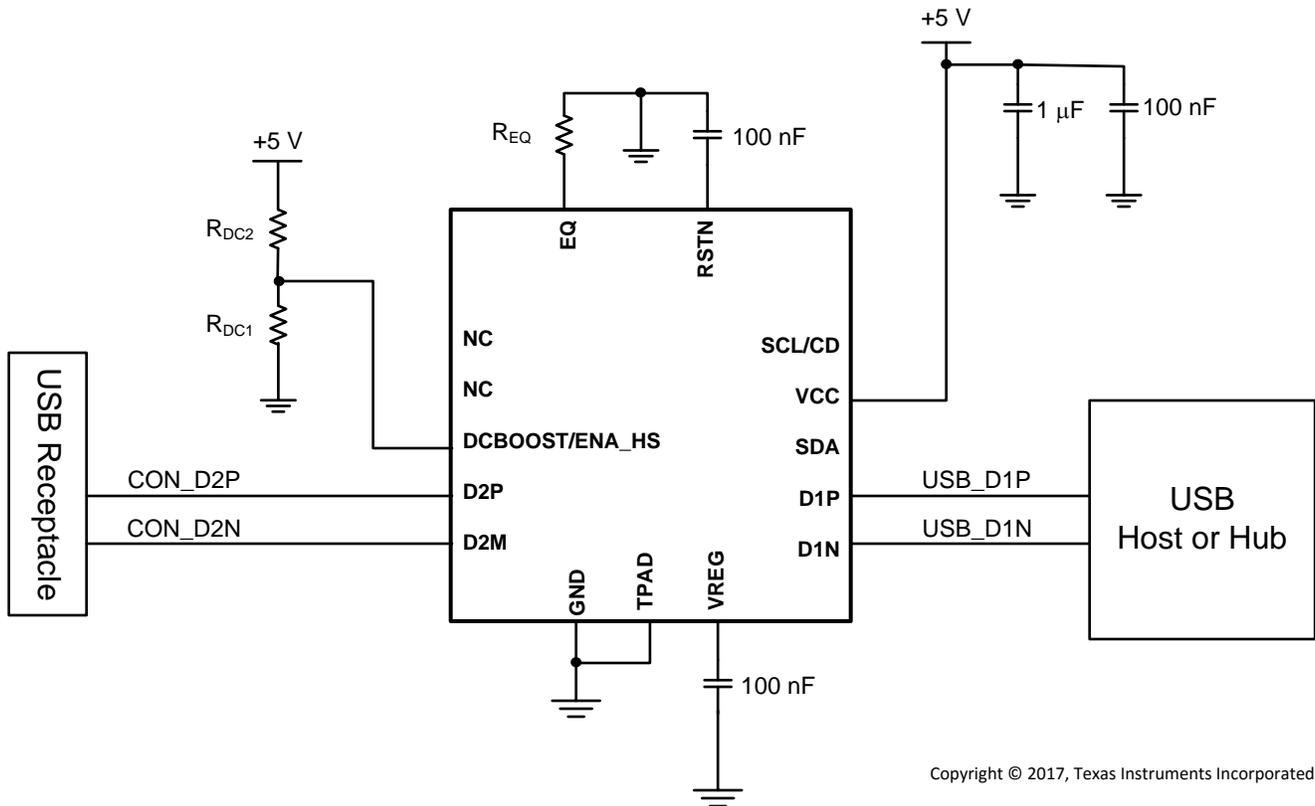

NOTE

The TUSB215-Q1 compensates for DC attenuation in the signal path according to the configuration of the DC_BOOST pin. This pin is not 5V tolerant and therefore when selecting the highest DC boost level, the voltage level at DC_BOOST pin must be less than 3.6V.

Placement of the device is also dependent on the application goal. [Table 4](#) summarizes our recommendations.

Table 4. Platform Placement Guideline

PLATFORM GOAL	SUGGESTED DEVICE PLACEMENT
Pass USB Near End Mask	Close to measurement point
Pass USB Far End Eye Mask	Close to USB PHY
Cascade multiple devices to improve device enumeration	Midway between each USB interconnect

Copyright © 2017, Texas Instruments Incorporated

Figure 7. Reference Schematic

8.2.2.1 Test Procedure to Construct USB High Speed Eye Diagram

NOTE

USB-IF certification tests for High Speed eye masks require the *mandated use* of the USB-IF developed test fixtures. These test fixtures do not require the use of oscilloscope probes. Instead they use SMA cables. More information can be found at the USB-IF Compliance Updates Page. It is located under the 'Electricals' section, ID 86 dated March 2013.

The following procedure must be followed before using any oscilloscope compliance software to construct a USB High Speed Eye Mask:

8.2.2.1.1 For a Host Side Application

1. Configure the TUSB215-Q1 to the desired AC and DC Boost settings
2. Power on (or toggle the RSTN pin if already powered on) the TUSB215-Q1
3. Using SMA cables, connect the oscilloscope and the USB-IF host-side test fixture to the TUSB215-Q1
4. Enable the host to transmit USB TEST_PACKET
5. Execute the oscilloscope USB compliance software.
6. Repeat the above steps in order to re-test TUSB215-Q1 with a different settings

8.2.2.1.2 For a Device Side Application

1. Configure the TUSB215-Q1 to the desired AC and DC Boost settings
2. Power on (or toggle the RSTN pin if already powered on) the TUSB215-Q1
3. Connect a USB host, the USB-IF device-side test fixture, and USB device to the TUSB215-Q1. Ensure that the USB-IF device test fixture is configured to the 'INIT' position
4. Allow the host to enumerate the device
5. Enable the device to transmit USB TEST_PACKET
6. Using SMA cables, connect the oscilloscope to the USB-IF device-side test fixture and ensure that the device-side test fixture is configured to the 'TEST' position.
7. Execute the oscilloscope USB compliance software.
8. Repeat the above steps in order to re-test TUSB215-Q1 with a different settings

9 Power Supply Recommendations

On power up, the interaction of the RSTN pin and power on ramp could result in digital circuits not being set correctly. The device should not be enabled until the power on ramp has settled to 4.4 V or higher to ensure a correct power on reset of the digital circuitry. If RSTN cannot be held low by microcontroller or other circuitry until the power on ramp has settled, then an external capacitor from the RSTN pin to GND is required to hold the device in the low power reset state.

The RC time constant should be larger than five times of the power on ramp time (0 to V_{CC}). With a typical internal pullup resistance of 500 k Ω , the recommended minimum external capacitance is calculated as:

$$C_{RSTN} = [\text{Ramp Time} \times 5] \div [500 \text{ k}\Omega] \quad (1)$$

10 Layout

10.1 Layout Guidelines

To avoid the need for signal vias, it is highly recommend to route the High Speed traces on the same surface layer than the TUSB215-Q1 is placed. shows an example how one could layout the PCB for TUSB215-Q1.

The layout should use impedance controlled traces to maintain 90 Ω differential impedance for the whole signal path as required per USB 2.0 specification. General guidelines for highspeed signal routing apply.

10.2 Layout Example

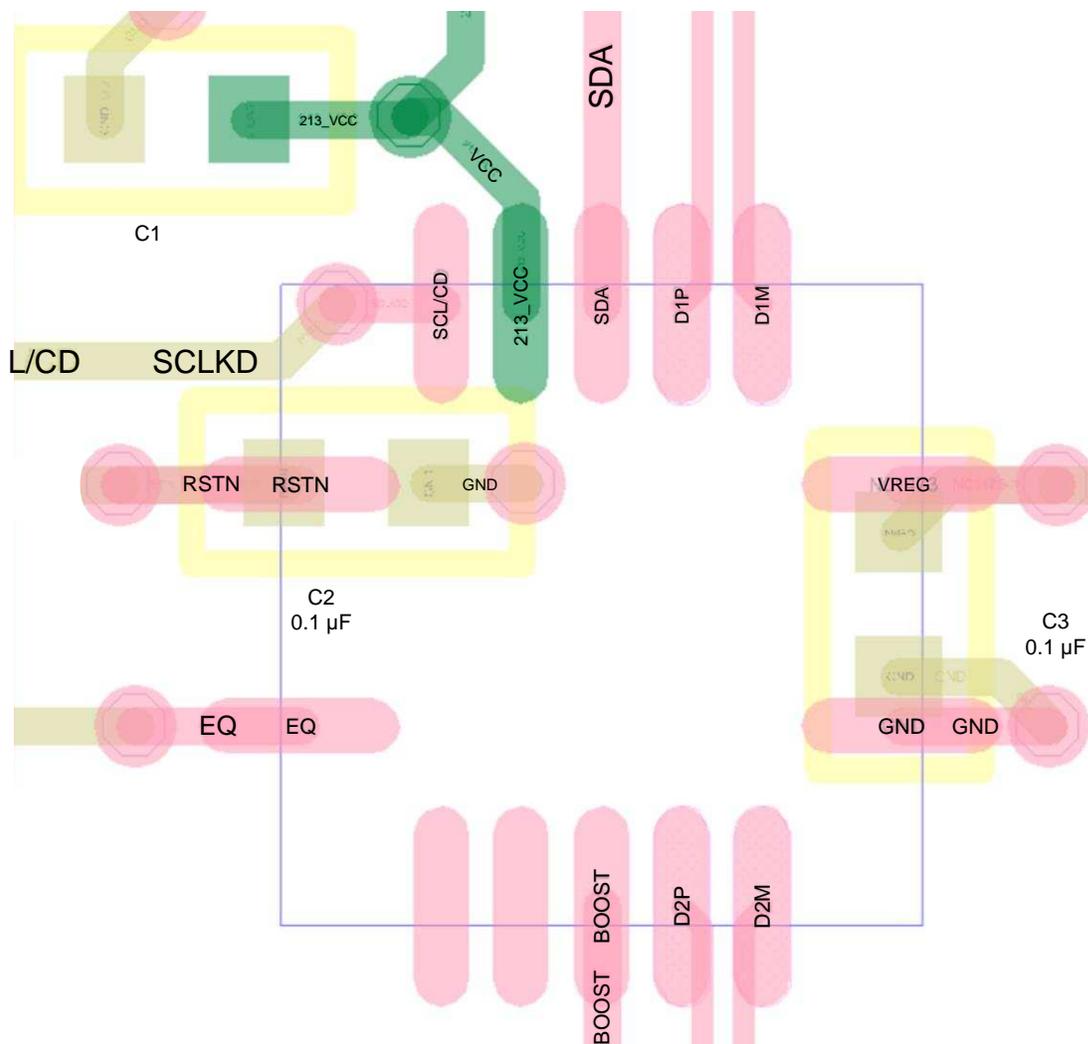

Figure 22. Layout Example

11 Device and Documentation Support

11.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

11.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

11.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

11.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

NOTES: (continued)

- 6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TUSB215QRGYRQ1	ACTIVE	VQFN	RGY	14	3000	RoHS & Green	SN	Level-2-260C-1 YEAR	-40 to 105	USB215	Samples
TUSB215QRGYTQ1	ACTIVE	VQFN	RGY	14	250	RoHS & Green	SN	Level-2-260C-1 YEAR	-40 to 105	USB215	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF TUSB215-Q1 :

- Catalog: [TUSB215](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale (www.ti.com/legal/termsofsale.html) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
